## GREENYELLOW AND SASOL ITALY INAUGURATE THE START OF CONSTRUCTION OF A 5.1 MWp SOLAR PLANT IN TERRANOVA DEI PASSERINI

*An emblematic project to accelerate the energy transition and strengthen the energy independence of Italian industry.*

GreenYellow, an international player in the decentralised energy transition, and Sasol Italy, the Italian subsidiary of the multinational group specializing in the chemical and energy sectors, have inaugurated the start of construction of a new photovoltaic solar plant in the municipality of Terranova dei Passerini (province of Lodi, Lombardy). With an installed capacity of 5.1 MWp, this facility marks a key milestone in Sasol Italy's sustainability and energy independence strategy.

### A HIGH-IMPACT ECONOMIC AND ENVIRONMENTAL PROJECT

Located on land owned by Sasol Italy, the plant, with a **total installed capacity of 5.1 MWp**, will be developed under a **tailor-made, turnkey Power Purchase Agreement (PPA)**. This model will allow Sasol Italy to benefit from green, local and competitive electricity thanks to **favorable and stable economic conditions over time**. The corporate will be able to consume the electricity produced directly on-site, manage any surplus, and benefit from guaranteed availability throughout the duration of the contract.

The site is scheduled to **be commissioned** in the **second half of 2026**. At full capacity, the plant **will produce +7.6 GWh per year**, equivalent to the annual **electricity consumption** of more than **2,800 Italian households**. This production will **avoid the emission of more than 4,000 tons of CO<sub>2</sub> per year**, thus contributing concretely to the climate objectives of Sasol and Italy.

The project has also benefited from the **contribution of EEMAXX INNOVATION**, a partner involved from the design phase and in managing the permitting process prior to construction.

## AN INNOVATIVE MODEL TO ACCELERATE THE ENERGY TRANSITION OF MANUFACTURERS

*"This project marks another important milestone in our energy transition journey and confirms our commitment to collaborate with partners such as GreenYellow to implement our sustainability strategy at Sasol Italy and achieve our emissions reduction targets at our Italian industrial sites."* underlines **Sebastiano Durante, Senior Manager Strategic Sourcing Energy & Emissions at Sasol Italy.**

Present at the project launch, **Rolando Furlong, General Manager of GreenYellow Europe**, adds: *"This project perfectly embodies our vision: making the energy transition accessible and sustainable for corporates. Italy is a strategic market for GreenYellow in Europe, and this initiative is a concrete illustration of our determination to accelerate the energy transition for Italian industrial players. By collaborating with partners such as Sasol, we are making a tangible contribution to the decarbonization of the industrial sector and building a more resilient energy future. »*

## A COLLABORATION DRIVEN BY SUSTAINABLE ENERGY PERFORMANCE

The Terranova dei Passerini solar project consolidates **GreenYellow's** position as a **committed accelerator to the energy transition** for corporates in Italy. Thanks to **fully customized turnkey projects** - including **study, financing, installation, management and maintenance** - this model allows corporates to focus on their core business, while entrusting **GreenYellow** with the **technical and operational oversight** of their installations with **complete peace of mind and confidence**.

The project is fully in line with GreenYellow's development strategy, which aims to strengthen its presence in Europe and establish itself as the leader in decentralized solar.

*"This project," emphasizes **Pierre Marouby, Country Manager of GreenYellow Italy**, "reinforces our ability to support industrial clients in their decarbonization journey. As energy is one of the main cost drivers for industry, we provide corporates with access to **green, local, predictable and competitive electricity**. Through **flexible contractual models**, such as **on-site PPAs**, we enable them to benefit from advantageous renewable energy, while reducing their exposure to market fluctuations and their dependence on the electricity grid. »*

## ABOUT GREENYELLOW

GreenYellow, a French company founded in 2007, has become in 18 years a major player in the energy transition in France and internationally, and a true partner of corporates and local authorities in their decarbonization journey and quest for energy independence.

As an expert in decentralized solar photovoltaic production, energy efficiency programs, energy storage, and electric vehicle charging infrastructure, GreenYellow supports its clients across the entire value chain. The group ensures the study, financing, development, and operation of assets that allow them to produce green, local, and competitive energy, reduce their energy consumption, while strengthening their competitiveness.

In 2024, the projects carried out by GreenYellow helped avoid the emission of almost 546,000 tons of CO<sub>2</sub> equivalent. The group also aims to achieve carbon neutrality ("Net Zero") for scopes 1 and 2 by 2040.

Operating in some 15 countries across 4 continents, GreenYellow innovates by constantly enriching its unique and global platform of offers to support its 1,400 clients towards a more sustainable energy model and meet the challenges of climate change. In Poland since 2022, GreenYellow Polska has more than 125 MWp of PV installed capacity in the country, working with clients such as Decathlon, Biedronka and Orange.

### **SASOL INTERNATIONAL CHEMICALS**

Sasol International Chemicals manufactures and markets a broad, state-of-the-art portfolio of specialty and commodity chemicals for a wide range of applications and industries. Our unique chemistry provides the building blocks for a more sustainable future and is used by more than 4,000 customers in 80 countries in countless products that improve the quality of life for people around the world.

Sasol International Chemicals is a business of Sasol Limited and manages its Northern Hemisphere chemicals business, its people, and its stakeholders, with end-to-end accountability for safe operations, profit and loss, technology and innovation, and delivering more sustainable solutions for our customers.
